Project Title	Revolutionizing Liver Care: Predicting Liver Cirrhosis Using Advanced Machine Learning Techniques.
Maximum Marks	

Data Collection Plan & Raw Data Sources Identification Template

Elevate your data strategy with the Data Collection plan and the Raw Data Sources report, ensuring meticulous data curation and integrity for informed decision-making in every analysis and decision-making endeavor.

Section	Description
Project Overview	The machine learning project aims to predict liver cirrhosis based on patient information. Using a dataset with features such as age, gender, medical history, lab results, and lifestyle factors, the objective is to build a model that accurately predicts the likelihood of liver cirrhosis, facilitating early detection and informed decision-making in healthcare.
Data Collection Plan	● Search for datasets related to liver cirrhosis, patient health records, and medical history. ● Prioritize datasets with diverse demographic and medical information.

Raw Data Sources Identified	The raw data sources for this project include datasets obtained from Kaggle, the popular platforms for data science competitions and repositories. The provided sample data represents a subset of the collected information, encompassing variables such as age, gender, medical history, lab results, and lifestyle factors for machine learning analysis.

Raw Data Sources Template

Source Name	Description	Location/URL	Format	Size	Access Permissions
Kaggle Dataset	The dataset comprises patient details (age, gender, etc.), medical metrics, and liver cirrhosis outcomes.	https://www.kaggle.com/datasets/bhavanipriya222/liver-cirrhosis-prediction	XLSX	47 kB	Public
